Branch for the Ministry of Energy (GSBME) and Mines seems to support this hypothesis. Airborne magnetic surveys conducted in 1967-1969 identified a large magnetic high anomaly, located in the central part of the claims which is a good indicator for a large magnetic body.

Stream settlement sampling around the area was also conducted. Sample #93M831897 conducted by the GSBME returned a in the ninety-five percentile for Au, La, Fe and Cu. The sample also yielded high readings for Co, U and REE were obtained. These readings are usually associated with Iron Oxide Copper Gold (IOCG) anomalies and targets.
